# KOHLER® Standby Generator + Trifecta Portable Generator Transfer Switch

Butler Rural Electric Cooperative offers a program for members to purchase a KOHLER standby generator or a Trifecta portable generator transfer switch. This program does not indicate Ohio's electric cooperatives have insufficient power generation or reliability issues. The program gives members the opportunity to prepare for outages the co-op has little control over.

## KOHLER STANDBY GENERATOR

Butler Rural Electric Cooperative offers a generator program for members to purchase a KOHLER® standby generator through the cooperative. The cooperative's board of trustees has budgeted to offer low-interest loans to help members finance such a major investment. You can also purchase a KOHLER standby generator from the cooperative without receiving a loan if you choose.

### **A KOHLER standby generator is perfect for:**

- > Members who want to power their entire home, including critical hardwired systems like AC, heat, sump pumps, well pumps, security systems, and large appliances.

## TRIFECTA PORTABLE GENERATOR TRANSFER SWITCH

For those who don't have a need for a whole-home generator, or for those who don't want to make that level of investment, we also offer the ability to purchase a behind-the-meter transfer switch called a Trifecta from Global Power Products. A Trifecta is a meter base-mounted transfer switch with a cord to use with a portable generator to power parts of your home. The cooperative provides free installation for the switch.

### **A Trifecta portable generator transfer switch is perfect for:**

- > Members who want to power parts of their home, like sump pumps and refrigerators.

## KOHLER STANDBY GENERATOR

Butler Rural Electric Cooperative offers qualifying residential members a loan of up to \$20,000 for the purchase and installation of a new KOHLER standby generator with the convenience of having your loan payment payable with your monthly electric bill. The loan funds will include labor, electric work, plumbing, and materials. To qualify for the loan, the member must purchase a KOHLER generator through Butler Rural Electric Cooperative. New construction homes, manufactured homes, commercial accounts, and seasonal accounts do not qualify for this loan. You can also purchase a KOHLER standby generator from the cooperative without receiving a loan, if you choose.

### Generator cost and size

The cost to purchase and install a KOHLER standby generator varies from location to location. If you are interested in installing a standby generator, an employee from Butler Rural Electric Cooperative's electrician services department will visit your home to perform a free site visit. Our electricians will work with you to coordinate a location for the generator and verify clearance requirements. Employees from the cooperative's engineering department will calculate a generator size for your home and will prepare a quote for the electric portion of the project. The member can choose the loan amount. Loan funds can cover labor, electric work, plumbing, and materials.

### Power source

Standby generators have their own power source – either propane or natural gas. If you do not have propane or natural gas at your home, Butler Rural Electric Cooperative can connect you with a company to install propane, LP line, and associated regulator at your home.

View our generator program manual, which includes the loan process and terms, standby generator installation process, and frequently asked questions at [butlerrural.coop](http://butlerrural.coop) > Energy Solutions > Member Programs > Generator Program.

## TRIFECTA PORTABLE GENERATOR TRANSFER SWITCH

Butler Rural Electric Cooperative offers a safe and easy connection for portable generators. Members can protect what powers their home with a Trifecta manual transfer switch. A Trifecta is a meter base-mounted transfer switch with a cord to use with a portable generator to power parts of your home, like your sump pump and refrigerator.

The cooperative provides free installation for these switches. Employees in our engineering department can calculate an appropriate size device for your home according to what you plan to power with your generator. Members must have their own portable generator to use this device – Butler Rural Electric Cooperative does not sell portable generators.

### Price list

**30 Amp Trifecta (TRI-23sx)**  
\$728.59

**40 Amp Surge Protection (TRI-24sx)**  
\$861.72

Price includes 20-foot cable and taxes. Additional cable is available in 20-foot increments for an additional charge. Butler Rural Electric Cooperative can order a 50 Amp device, if requested.
