NEW!

FEDERAL INCOME TAX CREDITS & INCENTIVES FOR ENERGY EFFICIENCY

As a result of the the Inflation Reduction Act (IRA) of 2022, new federal income tax credits are available through 2032 providing up to \$3,200 annually to lower the cost of energy efficient home upgrades by up to 30 percent. Improvements such as installing heat pumps, insulation, doors and windows, as well as electrical panel upgrades, home energy audits and more, are covered by the tax credits and can help families save money on their monthly energy bills for years to come.

Homeowners can also take advantage of the modified and extended Residential Clean Energy credit, which provides a 30 percent income tax credit for clean energy equipment, such as geothermal heat pump systems and rooftop solar.

Energy efficiency tax credits for improvements made in 2022

The federal tax credits for energy efficiency were extended as part of the IRA of 2022. So, if you made any qualifying home improvements to your primary residence after Dec. 31, 2021, you may be eligible to claim them on your taxes when you file for 2022.
